Intelligent – Retail Distancing Solution
Stay Safe when Shopping

With the current COVID-19 Pandemic and Social Distancing measure likely to continue for the foreseeable future, we applied our technological expertise to developing a solution to help retailers maintain social distancing in their stores.

Current Solution:

A member of staff stands at the door counting people in and out, we feel this not only loses a member of staff for the time the store is open but potentially exposes them to a greater risk of infection.

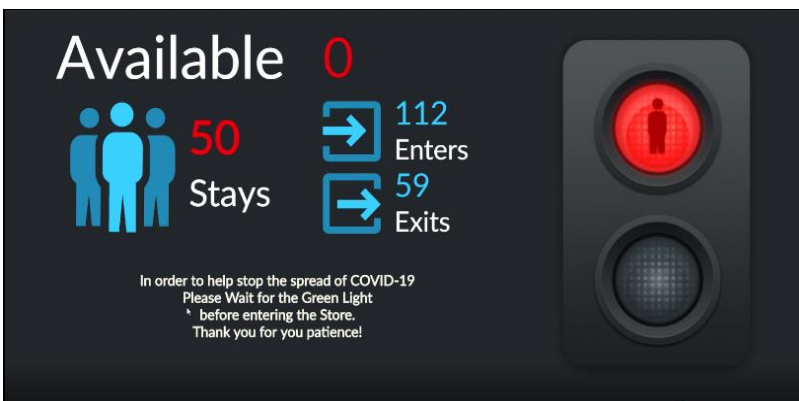

Our Solution:

Using the latest in Artificial Intelligence Cameras and cutting-edge software, we are able to fully automate the process.

Aiding in protecting your staff and customers, as well as offering customisable audio warnings, on screen message and a traffic light style system to inform people whether or not they can enter the store.

While there is still space in the store your customers are greeted with a green light and a friendly on-screen message (this is customisable to your needs)

Once your chosen Store limit is reached, the Traffic Light turns Red and an audio announcement is played that can again be fully customised to suit your needs.

Once someone leaves the store the light will change, and a second announcement will play informing customers that they may now enter.
